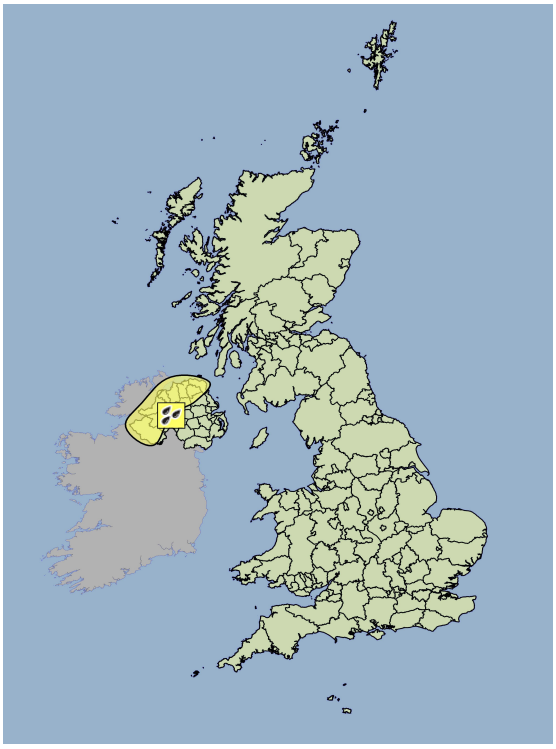
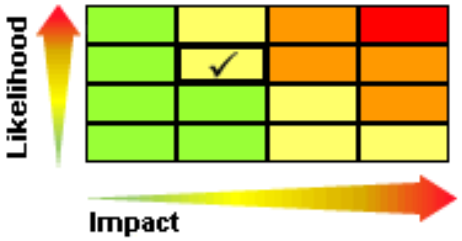
National Severe Weather Warning Service





Chief Forecasters Assessment
A waving frontal system will move across Northern Ireland from Wednesday evening and overnight into Thursday bringing some heavy outbreaks of rain to the province, particularly in western parts. 10-15 mm of rainfall is expected quite widely here with around 25 mm possible in places, the bulk of this falling in 6 to 9 hours. Following recent wet weather the ground is saturated and so there is a low risk of localised flooding. There remain some uncertainties in the speed of movement of this system but the majority of the rain should be clear by the end of this warning with occasional showers to follow.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **00:00 on Thu, 20th Feb 2014** until **09:00 on Thu, 20th Feb 2014**

Outbreaks of rain will affect Northern Ireland from Wednesday evening and overnight into Thursday morning, particularly in the west. This will be heavy at times and with saturated ground from previous wet weather there is a low risk of localised flooding.

The public should be aware of the potential for localised flooding and disruption to travel.
